

ROTAX®

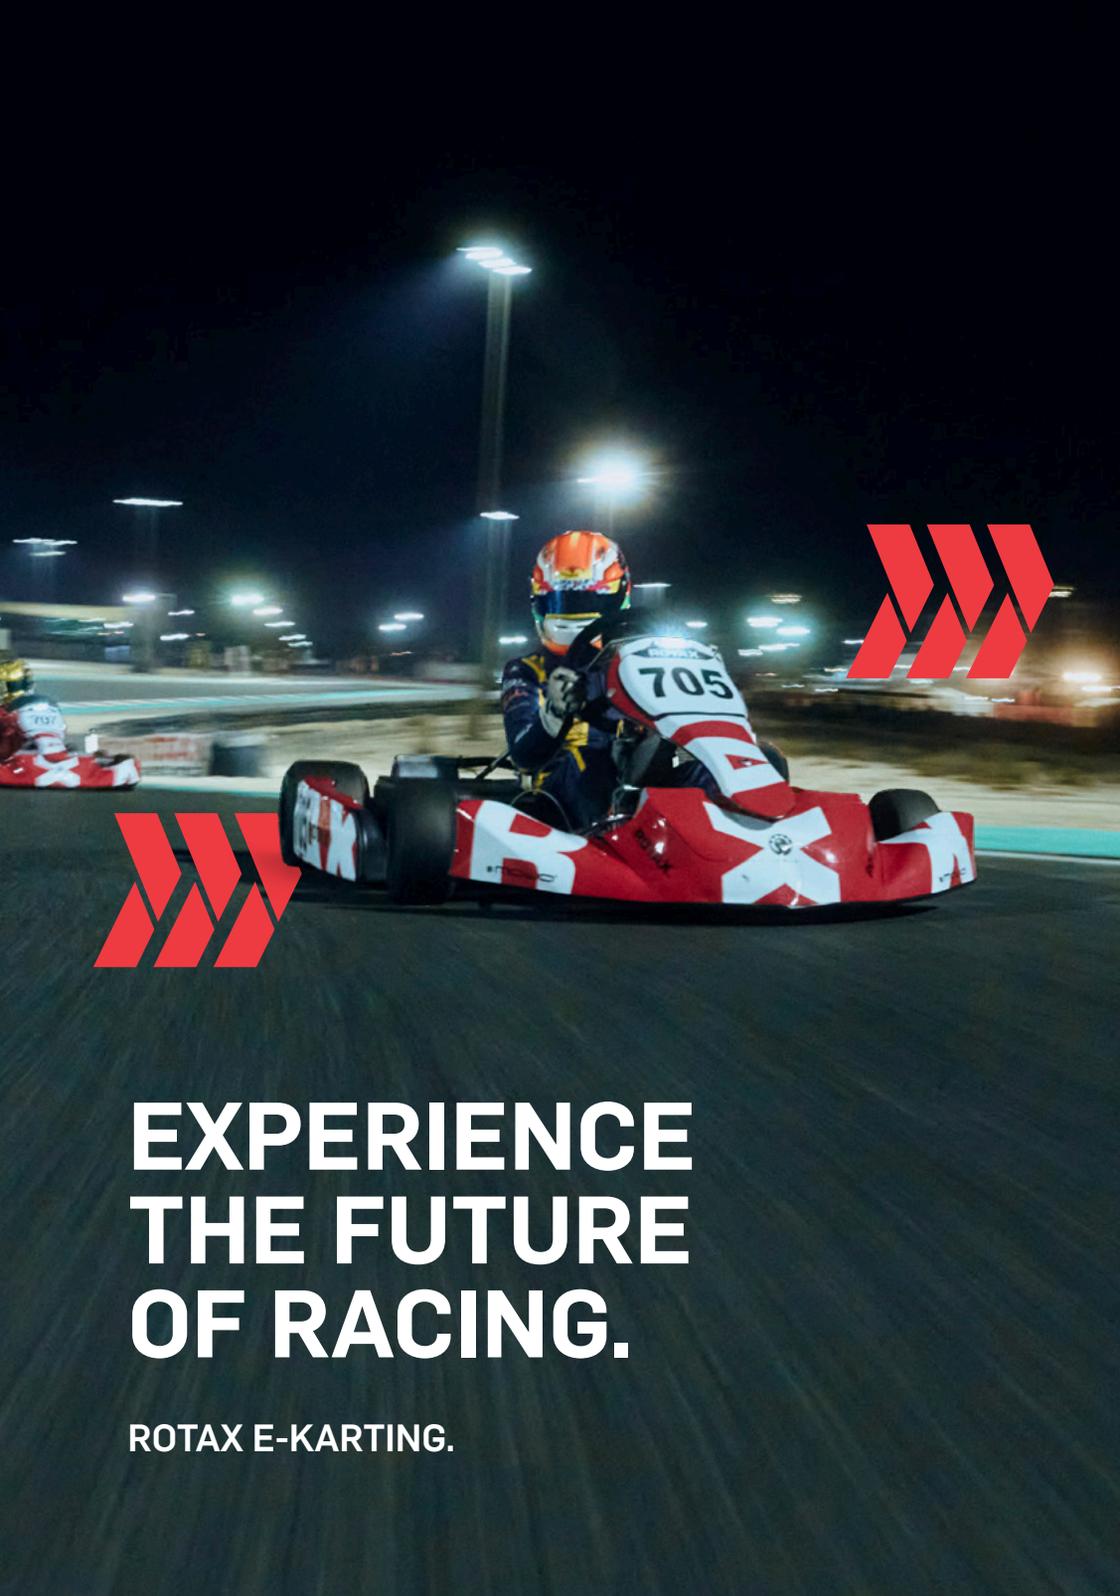

**RACING IS
THE COURAGE
TO BREAK NEW
GROUND.**

” Discussions in karting always are about someone having a better engine or a better chassis.

When you drive the E20, it's just a question of what the driver can do.

Xen de Ruwe
Race Driver Rotax 125 Max DD2

EXPERIENCE THE FUTURE OF RACING.

ROTAX E-KARTING.

BOOST YOUR PERSPECTIVE.

Change the game.

Speed, power, and performance meet electrifying adrenaline-fueled fun: Offering test drives and racing opportunities alongside major racing events, the Rotax Project E20 tours the European kart circuits with a fleet of new and unique racing karts.

Boost your skills.

All E-Karts come with the same specs and powerful performance. This parity is an opportunity and a challenge. With everyone leveraging the same technology, outcomes are entirely up to the driver, their reflexes, and choices out on the track. The Rotax Project E20 enables data-based coaching - look at the data and figure out how you, as the person in the driver seat, get the best out of the track and yourself.

Discover the power of silence.

For many in the racing community, especially spectators, its distinct sound landscape is part of the kart racing experience. For race drivers, the noise can be a drawback. With the Rotax Project E20, race drivers are now discovering the substantial benefits of low-noise racing – more focus on competing drivers and the strategic advantage of sounds – the changing wind on the visor, the sound of running over curbs, and the shifting sounds of the tires.

Taste the performance.

- > faster than ever
- > 0 to 100km/h in 3,5 sec
- > full power from start to end
- > interactive display
- > purest racing feeling
- > arrive & drive
- > boost button on steering wheel
